UZIN PROBLEM SOLUTION:

PRIMING TILES AND WOODEN SUBSTRATES IN NEED OF RENOVATION QUICKLY AND SECURELY.

With UZIN PE 630.

The question that always arises regarding the renovation of old substrates, such as wooden floor boards as well as dense and smooth substrates, e.g. tiles, is how a flat installation surface can be created?
UZIN has the answer UZIN PE 630 a rapidly drying 2-component primer and filler. The advantage of the UZIN PE 630 dispersion-cement lies in its water-binding powder component, which after mixing results in a viscous filling primer and ensures an exceptional bond between both the substrate and the subsequent levelling compound. Furthermore, UZIN PE 630 stands out by its superb speed and usability.

„Not only does UZIN PE 630 provide safe, easy filling and priming for substrates with many joints but it is also very fast drying.“

RENOPLAN SYSTEM

PRIMING TILES AND WOODEN SUBSTRATES IN NEED OF RENOVATION QUICKLY AND SECURELY.
UZIN HAS A SOLUTION WITH RENOPLAN SYSTEM.

Firstly clean the substrate ensuring unstable layers or any materials that would impair adhesion such as dirt, oil, grease are removed by grinding or abrading.

Thoroughly clean the area with a powerful industrial vacuum cleaner.

The 16 kg packaging is designed as a mixing bucket. Take the liquid and powder components out of the packaging and pour the liquid component A into the packaging.

Cast in powder component B whilst stirring vigorously until a lump-free compound is obtained. Only mix as much primer which can be applied within approx. 60 minutes.

Mix thoroughly with a bird cage mixer for several minutes.

05

Thinly apply UZIN PE 630 with a smoothing trowel.

The area is ready for foot traffic after 60 minutes. Mix UZIN NC 170 LevelStar levelling compound with clear, cold water and spread a even coat over the area with a smoothing trowel or the WOLFF screed rake with R2 notch.

The video is available on the UZIN YouTube Channel.
